Steer your Primary School towards success

integris G2

a new school of thought
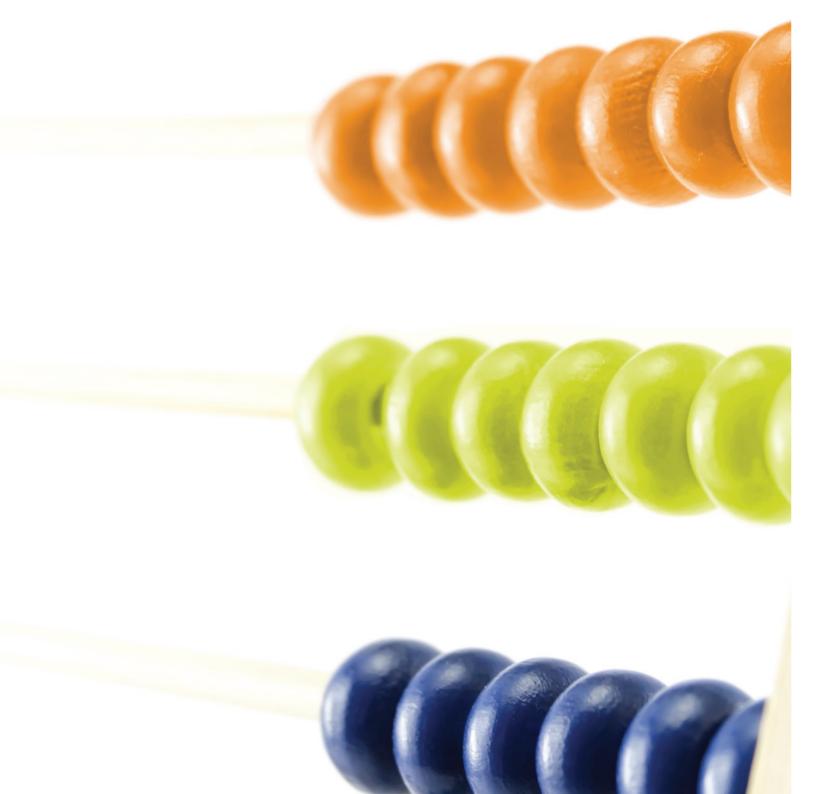

Set your school...
on course for success

Integris^{G2} is the only school Management Information System (MIS) specifically designed for Primary Schools. Pull together assessment data, behaviour reports and attendance information with robust analytical tools to give you a 360 degree view of your pupils.

Read on to find out how Integris^{G2} can:

- Improve the performance of your school
- Help engage parents in their child's education
- Securely share information with your Local Authority
- Support a more flexible way of working for your teachers
- Save your school office valuable time
- Improve school census and statutory reporting requirements

What Integris^{G2} can do for...
your school

Make informed decisions

With seemingly endless Government initiatives and targets, and only so many hours in the day, it is essential that you keep an eye on where resources should be focused. But how do you identify where the need is greatest?

The reporting functionality and analysis tools within Integris^{G2} help you monitor the impact of your school improvement initiatives, benchmark against last year's performance and use simple and practical tools to keep the school on target.

Spend money on teaching, not administration

We're all trying to improve school performance, but there's only so much money in the pot.

The good news is that moving to Integris^{G2} means your school will never need to purchase another MIS server again. It's really quite simple; all you need to run the fastest-growing school MIS in the UK is the web browser already installed on every computer in your school.

Involve your teaching staff

Who knows more about pupil progress than your teaching staff? It's essential that the data in your MIS reflects all the work your staff put in. That's why Integris^{G2} has been designed to be used in the classroom with only minimal training required.

See how Integris^{G2} can help you make informed decisions at
www.integrisg2.com

your teachers

A practical tool for improving attainment

Included with Integris^{G2} is an easy-to-use assessment module that brings pupil progress against target to the desktop of every teacher.

Integris^{G2} turns your teachers' markbook from a simple record of achievement to a powerful tool to improve performance. Every teacher can understand pupil progress against target and cross-reference against important variables from Integris^{G2} behaviour and attendance data.

Bring school policy to life

Integris^{G2} brings your behaviour and attendance policy into the classroom with a simple interface for recording information. Many schools already running Integris^{G2} use the attendance screen on the interactive whiteboard to take the register every morning, engaging pupils from the very start of the school day!

Teachers can also use the behaviour screen on their laptop to record behaviour incidents without the need to resort to paper 'slips'. And because Integris^{G2} supports the use of points for rewarding good behaviour team or house points can be saved immediately for action later.

Introducing real flexible working

Because Integris^{G2} is completely web-delivered your teachers can access the system from any location.

Using a laptop in the staffroom or working on school reports from home, all pupil data is secured within the system and local copies do not need to be kept. So if a school laptop goes missing, you don't need to worry about losing the work that's already been done or the sensitive data on it!

What Integris^{G2} can do for ...
your pupils

With Integris^{G2}, the pupil is at the heart of the system

To personalise pupil learning you need a clear understanding of each individual pupil. A suite of useful reports and analysis tools give you the information needed to adapt teaching methods, plan lessons and develop activities to suit individual pupil requirements.

Learning platform integration

Your school MIS is most effective when used as the tool to inform your decisions, manage pupil behaviour, attendance and improve assessment.

That's why we specialise in delivering this information in and around the school and provide you with the option to integrate Integris^{G2} with your choice of Learning Platform.

Engaging parents

Integris^{G2} makes it easier to communicate with parents, engaging them with their child's progress at school.

• Make use of text messages or email by integrating with an attendance messaging package to contact parents when their child is absent

• Keep parents up-to-date on their child's progress with school reports. The Reporting to Parents module within Integris^{G2} makes it easier for Teachers to produce school reports pulling in existing data from other modules within Integris^{G2}

RM recommends that in the absence of an authority portal or other local initiative, using your school learning platform or VLE is the best way to provide online reporting to parents for the 2012 requirement.

What Integris^{G2} can do for ...
your school office

Reducing the burden

Your school administrator plays a key role in your school. Isn't it time they had a system that worked for them?

Integris^{G2} gives your School Office all the tools they need to support you. An easier system to use and maintain, Integris^{G2} releases your School Office to concentrate on what's important – your school!

- All software upgrades are automatically applied
- All data back-ups are automatically taken
- Census 'Health Check' always available
- No need to maintain an administration server
- Teachers can see their own class data without needing to rely on the school office

"Integris^{G2} is amazing. It's so simple to use and it never lets us down. In SIMS we used to spend hours just doing the downloads for patches. With Integris ^{G2} it just happens overnight and we get a cheery note to say the upgrade was successful. Also, the Helpdesk service is second to none – answers are immediately available. I would recommend Integris ^{G2} to anyone who asked."

Kathy Lyons, School Manager, St George's New Town Junior School, Essex

What Integris^{G2} can do for ...
your local authority

Working together

Most primary schools in the UK use the MIS supported by their local authority.

The good news is that Integris^{G2} can be supported by the same team, or by RM, the choice is yours. Our award-winning customer service operation delivers school support on a national basis and you may find that other schools in your region have already upgraded.

There are also many good reasons to ask your authority to support you on Integris^{G2}. With your permission, your Local Authority can answer data requests without burdening your school office.

The important thing to remember is that the choice of school MIS is yours. Provided you run SIMS.net, Serco Facility, Pearson Gold or Wauton Samuel RM can migrate your school data onto the new platform and provide any training you require.

Easily share data with your Local Authority — see how at

"Integris[G2] has brought in new functionality which makes our job so much easier. For example, being able to add notes in the electronic register against individual pupils makes it easier for teachers to track attendance. Also, the ability to create our own ad hoc reports is brilliant — they're easy to do and suit our own specific requirements."

Isil Mustafa, School Administrator, Stamford Hill Primary School, Haringey

"We are a new user of Integris[G2] and are already impressed by the attendance module. The system will provide teachers with the functionality to take the register online in the classroom, updating the data immediately which will greatly improve attendance data. Reporting is very simple and quick, a very useful tool."

Angela Lancefield, HLTA/Pupil Welfare, Mersea Island School, Essex

"In Integris[G2] we feel we have found an excellent web delivered school MIS that is tried and tested in over 21 Local Authorities. We look forward to using functionality such as assessment analysis to further improve our school."

John Dye, Head Teacher, Martham Primary School, Norfolk
